

DIAMOND D[®]

Ultra Impact Denture Acrylic

Use of the Diamond D Ultra Impact Denture Acrylic enables the dental professional to make thinner, lighter, and less intrusive more comfortable fitting dentures than is possible using any other denture acrylic currently on the market.

1. *High Impact Resistance*
2. *Exceptional Flexural Strength*
3. *Highest in Total Fracture Work*
4. *Homogenous Dough Stage makes for better injecting or packing.*
5. *Available in five popular shades, Original, Light Fiber, Light Reddish Pink, Dark Veined, Chroma-Essence**

* The Chroma- Essence shade is unique in that it is a micro-fibered acrylic that possesses a higher than average opacity. These are desirable traits if color characterization of the denture base is performed.

"Diamond D Ultra Impact Denture Base Acrylic is manufactured by Keystone Industries in their cGMP, ISO 9001:2000 and ISO 13485:2003 compliant facility located in Cherry Hill, New Jersey USA."
